### IPad2 Case with UK Bluetooth Keyboard

Instructions

Thankyou for purchasing the iMage for iPad2 case with bluetooth keyboard

Power on/off
Micro USB charging port
Illuminated pairing button

* We advise before your first use to charge the keyboard for at least 3 hours.

Charging...

To charge the keyboard, insert the supplied micro USB cable into the charging port on the keyboard, and then the USB end either into a computer USB port or into your iPad2 wall charger.

Computer USB port

or

USB wall charger

Please note to insert the charging cable the correct way round. The cable connector is shaped so it can only be inserted one way round.

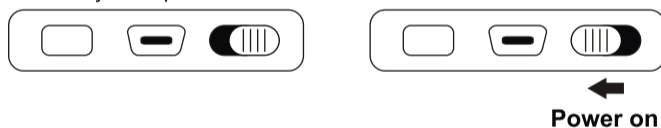

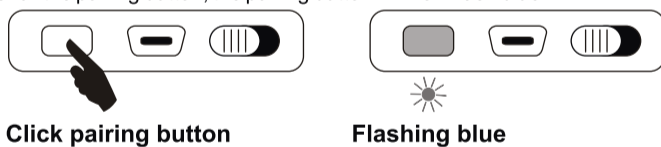

Pairing keyboard with iPad...

You must first pair the keyboard with the iPad2 before you can use it.

1) Turn the keyboard power on

Power on

2) Click the pairing button, the pairing button will now flash blue.

Click pairing button   **Flashing blue**

3) On your iPad2, go Settings > General > Bluetooth and turn Bluetooth on.

Settings	General	Bluetooth
Airplane Mode	OFF	
Wi-Fi	Bluetooth	ON
Carrier	Devices	
Notifications	On	Bluetooth Keyboard	Connected
Cellular Data	Now Discoverable	
Brightness & Wallpaper		
Picture Frame		
General		
Mail,Contacts, Calendars		

4) You will now see the 'Bluetooth Keyboard' appear under Devices. Select this and if prompted enter the passkey that appears on the iPad screen on the keyboard, then press the Enter key. The keyboard should now say 'Connected' on the iPad screen.

Pairing button LED colours...

Blue: Flashing blue for Bluetooth pairing
Red: Flashing red for low battery
Amber: Charging, no LED once charged

Keyboard layout...

To make use of the € and # symbol on the keyboard, please hold the 'alt / option' key and press either the € or # key. To access the media hot keys simply press the relevant key.Some keys on the keyboard like 'fn, f1-f16' and end are not defined on an iPad2 but are on an iMac.

Battery life...

This product has an internal lithium-ion battery.

If you are working 8 hours a day and typing time is around 2 hours, from a full charge the battery will last approximately 1 month. Under continual typing of 6 keys per second the battery will last approximately 2 days.

When the red low power LED flashes, it will take around 2.5 hours to fully charge, once the red low power LED is flashing you can still use the keyboard for around 7-8 hours of continuous typing.

After 300 charges, the battery still has over 85% storage, after 500 charges, the battery has over 60% storage. For example if you charge the unit once a month the battery will still have 85% storage after 25 years!

If the unit is left on, not used and goes to sleep mode, the battery will last approximately 42 days. If the unit is switched off and not used, from a full charge the battery will still have around 20% life after 2 years!
